

Redesigning a Public Service Platform for Enhanced UX & Accessibility

Capstone Project

Prepared By: **Preetham**

Role: UX Designer

- **Objective**

The goal of this project is to redesign a public service platform to improve:

User Experience (UX)

Accessibility

Navigation

Ease of use

Overall user satisfaction

Pain Points Identified

Users struggle to navigate multiple menus.
Important services are difficult to locate.
Long forms are confusing.
Elderly users face accessibility challenges.
Application tracking is difficult.

Persona 1: Ravi Kumar

- Age: 65
- Occupation: Retired Teacher

Goals

- Pay utility bills
- Apply for certificates

Challenges

- Small text
- Complex navigation

Home Dashboard

— Search Services

— Citizen Services

- Birth Certificate
- Income Certificate
- Utility Bill Payment
- License Services

— Application Tracking

— Notifications

— Help Center

— User Profile

— Accessibility Settings

Screen 1: Dashboard

- Search bar
- Frequently used services
- Notifications

Screen 2: Service Application Form

- Progress indicator
- Large input fields
- Previous and Next buttons

Screen 3: Application Tracking

- Application ID
- Current status
- Estimated completion date

Testing Plan

Target Users:

Patients aged 45 to 75 and citizens using multiple public services.

Tasks

1. Apply for a service.
2. Track an application.
3. Access Help Center.

Metrics

- Task completion rate
- Time on task
- User satisfaction

Conclusion

The redesigned platform improves usability, accessibility, and navigation while reducing user confusion and making public services easier to access.
